Solar Heating & Cooling Programme

Première mission : statistiques annuelles

Solar Heat Worldwide 2017

Global capacity in operation [GW_{el}], [GW_{th}], and energy supplied [TWh_{el}], [Twh_{th}], 2016

Global capacity in operation [GW_{el}], [GW_{th}] 2016 and annual energy yields [TWh_{el}], [TWh_{th}]

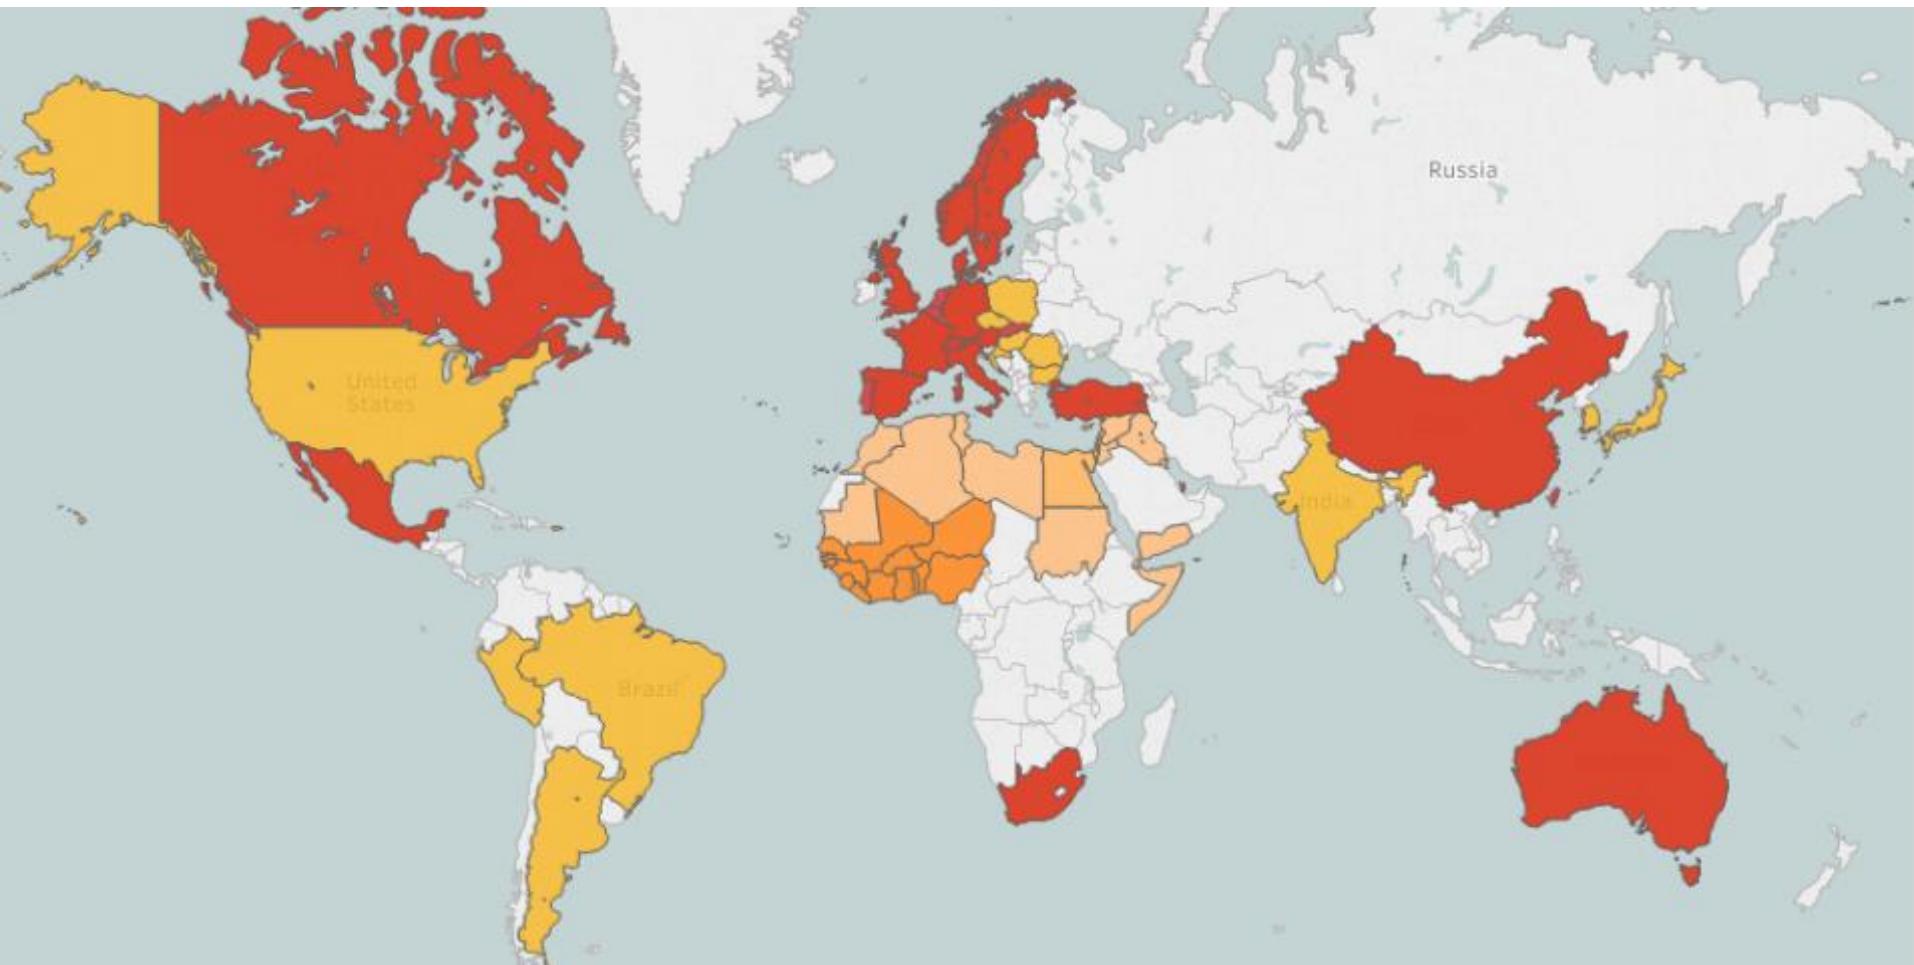

(Sources: AEE INTEC, Global Wind Energy Council (GWEC), European PV Industry Association (EPIA), REN21 - Global Status Report 2017)

Contexte global du Solaire thermique en 2017

- Chaleur représente > 50% de la consommation d'énergie finale globale et 38% des émissions de CO₂
- Croissance thermique solaire ralentit - 7,4 fois de croissance de 2000 à 2016 – (concurrence accrue des autres énergies renouvelables, déclin du marché chinois)
- Ralentissement sur les plus grands marchés - Chine et Europe
- Croissance petits marchés - Inde, Amérique latine et Afrique subsaharienne
- Changement de marché - Petits Systèmes vers des systèmes à grande échelle pour chauffage urbains et processus industriels

IEA SHC Membres & Sponsors

█ 20 Member Countries + EC
+ 5 Sponsor Organizations

█ Sponsors – 47 additional Countries

█ RCREEE	█ ECREEE	█ ISES
---	---	---

Map is without prejudice to status of or sovereignty over any territory, to delimitation of international frontiers/boundaries and to name of any territory/area.

Plateforme (TCP) SHC en qq chiffres

- 20 pays membres, UE et 5 sponsors (CEREEC, RCREEE, ISES, ECI, GORD)
- 10 tâches (Tâche partagée) axées sur:
 - * Technologies de chauffage et de refroidissement solaires pour utilisations finales résidentielles, commerciales, industrielles et agricoles
 - * Projets de renforcement des capacités pour toutes les technologies solaires
 - * Informations sur le marché et projets pour soutenir le déploiement du marché mondial.
- Experts participant aux tâches:
 - Participant officiellement
 - Total env. 600
 - 28% provenant de l'industrie
 - Informellement engagés
 - Total env. 1,700
 - 35% de l'industrie

Autres activités

- SHC International Conference on Solar Heating and Cooling for Buildings and Industry – 5th conference (SHC 2017) - 1^{ere} conjointement avec ISES, Nov. 2017 à Abu Dhabi
- Collaboration avec Solar Trade Associations – 11th meeting durant SHC 2017 à Abu Dhabi
- SHC Solar Award – Gagnant 2017 : Austria's Climate and Energy Fund, présenté à SHC 2017 à Abu Dhabi – Ville de Montmélian (France) en 2013
- Solar Academy – webinars, videos, journées spéciales mesure
- Solar Heat Worldwide – rapport annuel statistique
- Task publications/databases/info sheets/newsletters
- SHC book series avec Wiley Publishers
- Programme newsletter, Solar Update – 2 par an
- Social Media
 - Twitter - @IFASHC
 - LinkedIn – TECSOL

Objectifs de SHC pour 2019-2023 :

- Travail sur la performance de la technologie SHC (efficacité du système)
- Travail sur la réduction des coûts des composants et des systèmes de chauffage et de refroidissement solaires
- Travail sur les applications d'utilisation finale efficaces du chauffage et du refroidissement solaires, y compris les technologies solaires thermiques et l'utilisation du photovoltaïque pour le chauffage et le refroidissement.

Principaux projets récents !

- **Lighting Retrofits for Buildings** – developed the *Lighting Retrofit Advisor*,
- **Solar Certification** – Global Certification Network operating
- **Thermal Energy Storage** – Task begins in 2017 - materials & components
- **System Price Reduction** – Covers costs for entire value chain
- **Solar Cooling** – monitoring procedure for field tests and demo systems focused on heat pumps driven by photovoltaics
- **Solar Energy in Urban Planning** – Task 51's summer school tested solar teaching methods and tools
- **Solar Heat & Energy Economics in Urban Environments** – cost analysis of solar district heating plants shows large variation, especially for small systems
- **Solar District Heating** – Large systems competitively priced (<40 €/MWh)

Nouveaux sujets

- Task 59: Renovating Historic Buildings To Zero Energy
- Task 60: Application of PVT Collectors and New Solutions with PVT Systems
- Task 61: Integrated Solutions for Daylight and Electric Lighting
- PVT Systems Solar Energy in Industrial Water and Wastewater Management
- Life Cycle Assessment for Solar Heating and Cooling Technologies
- Renewable Heating: Enhanced Systems in a Digital Environment

Task 49 - Solar Heat Integration in Industrial Processes

SHC Task 45

Large Scale Solar
Heating and Cooling
Systems

Large Systems: Large Solar Heating/Cooling Systems, Seasonal Storage, Heat Pumps

Overview

The main objective of this task is to assist in the development of a strong and sustainable market of large solar heating and cooling systems by focusing on cost effectiveness, high performance and reliability of systems. The work's main focus will be on the system level and how to match a system configuration to the local needs and conditions.

Task 45 - Large Scale Solar Heating and Cooling Systems

Number	Subject
45.0	IEA SHC Task 45 FACT SHEETS - overview
45.A.1	Correction of collector efficiency parameters depending on variations in collector type, fluid type, collector flow rate and collector tilt.
45.A.2	Requirements & guidelines for collector loop installation
45.A.3.1	Performance guarantee - Collector field power output (R1)
45.A.3.2	Performance guarantee - Collector field annual output
45.A.4	Simulation of large collector fields
45.B.1	Seasonal thermal energy storage - Report on state of the art and necessary further R+D (<i>not in final fact sheet format</i>)
45.B.2	Seasonal storages - Monitoring
45.B.3.1	Seasonal storages – Bore hole heat storage – Guidelines for materials & construction
45.B.3.2	Seasonal storages – Water pit heat storage – Guidelines for materials & construction
45.C.1	Categorization of large solar heating and cooling systems
45.C.2.1	ESCO models - General
45.C.2.2A	ESCO models - Best practice ex: Lisbon
45.C.2.2B	ESCO models - Best practice ex: Graz
45.C.2.3	ESCO models - Energy performance contracts

SHC Task 55

Integrating Large SHC Systems into DHC Networks

Towards the Integration of Large SHC Systems into District Heating and Cooling (DHC) Networks

The Task aims to develop technical and economic requirements for a commercial market introduction of solar district heating and cooling (DHC) in a broad range of countries.

More information can be found in the [Task description](#).

What's New

NEWS **MEETINGS** **PUBLICATIONS**

Release of a MATLAB Toolbox to calculate pressure loss coefficients (zeta values) for T-pieces at low Reynolds numbers (Posted: 2017-06-07)

IEA SHC Task 55: Solar District Heating Means Big Business - Solar district

Présence d'un participant français : NEWHEAT !

Nouveau projet (phase de concept):

Solar energy in industrial water management

Focus du projet: Solar energy in industrial water management

Low temperature solar radiation technologies supplying either

- thermal or photon primary energy
- for fluid separation and water treatment
- in regard to industrial applications and sewage plants

Début prévu fin 2018..

Un Exemple français de projet innovant de solaire dans l'industrie (appel à projet Grandes Installations ADEME)

**Entreprise Lys Services
Merville (59)
Lavage industriel
de citernes de poids lourds**

Eau chaude de process

Utilisation d'eau chaude pour nettoyer l'intérieur des citernes de camions transportant des poudres ou liquides alimentaires

Lavage des citernes

Une consommation d'environ
70 m³/jour - 5 jours sur 7

Têtes de lavage introduites dans les citernes

Projet solaire

Opticube (source : Sunoptimo)

- 1172 m² de capteurs au sol

=> **SUNOPTIMO Opticube concept**

- Chantier en cours
- Productivité : 422 kWh/m²/an

- Contrôle bon fonctionnement TECSOL
- Projet accompagné par l'ADEME
- **LCOE de 40€/MWh (objectif)**

Merci pour votre attention!
